Art Unit: 3683

## **DETAILED ACTION**

1. Information Disclosure Statement filed on 8/30/02 has been received. Preliminary Amendment filed on 5/23/02has been received. Declaration filed on 4/23/02 has been received.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuebler at al (U. S. Patent no. 2,991,526).

See figures lock housing, guide housing 18, first shoe 22, second shoe 20, means to position first shoe 150, means to position second shoe 150 (vertically), 28,30 (horizontally), handle 126, guide means 44,46,48,50

Regarding automatic closing means, see column 4 line 30 - column 5 line 3

Application/Control Number: 10/074,599 Page 3

**Art Unit: 3683** 

## Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuebler in view of Dalmaso (U. S. Patent no. 4,560,029).

Kuebler is relied upon as above. Kuebler does not disclose a first and second cam pivotally mounted on the housing with equal rotations to move the second brake shoe. Dalmaso teaches a first and second cam pivotally mounted on a housing with equal rotations to actuate a rope brake (cams 78,80). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use two cams as taught by Dalmaso in the system of Keubler in order to have a uniform application of the brake force (see Dalmaso Column 2 lines 2-5).
